nanonavi® Virtual-Care® upgrades to version 3.03

Nanomatic, a global company that makes mobile social applications and GPS devices, today announced its mobile secure application - nanonavi®-VC, has upgraded to version 3.03, which integrates tracking and monitoring service into a customized, comprehensive, and easy to manage solution. nanonavi®-VC supports remote configuration and is available on different operating systems, including J2ME, Symbian, Windows Mobile, Apple iPhone, and Android. Concurrently, nanonavi®-VC is now available on web (<http://www.nanonavi.com/web>), providing 'Net of Care' in multiple platforms – mobile phones, call-centre operations, social networks and web.

nanonavi® Virtual-Care® can instantly turn web and mobile phone into personal monitoring platform, as well as becoming a personal tracking device. It gives users a breakthrough security functionality to care remotely for person and assets, anywhere in the world. Additionally, nanonavi-VC gives users the ability to locate and monitor small nanofinder® devices (GPS trackers) placed with children, elderly, pets or inside valuable assets, like car or boxes with valuables during transit. With high assignability, users can freely allocate a nanofinder® between person and/or asset based on actual need, reducing the cost of having a dedicated device for each object.

About Nanomatic

Nanomatic is a leader in Nano-Information-Technology, and creates software for enterprises around the world, as well as secure mobile social applications and location aware devices for the consumer market. The company was founded in London, has R&D headquartered in Hong Kong, with marketing and sales offices in Silicon Valley, California.
