Most GPS collars for pets are hideous. They are usually black and bulky and do the job, but you know Fifi would rather have something more fashionable. The Nanofinder PetFinder is a small and stylish pet collar which is also a GPS/GSM watch style tracker. Working in conjunction with Nanonavi software, you'll be able to locate your pet instantly via SMS/GPS/GPRS. Just download the Nanonavi software to your mobile device and you'll be able to track that runaway dog instantly. It also works as a GEO-fencing control collar if you have a dog like Marley....

Additionally, the software also serves as a way of keeping up with friends who are on Facebook and all the other social media networks in realtime. So if one of your buddies gets FriendFinder (which also features interchangeable faceplates) you will always know if they are indeed hanging with The Plastics or not. Utilizing the Nanofinder devices, this kicks the Nanonavi software up a notch to actually be a locator. The PetFinder collar is currently available and retails for \$199.00. The FriendFinder retails for \$249.00.
